DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, drawn to a latching mechanism, classified in class 403, subclass 109.1.
 - II. Claims 6-17, drawn to the combination latching mechanism and adjustable stock, classified in class 42, subclass 72.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed does not require the bicuspid tooth mounted upon the cam mechanism, the latch mechanism mounted on the cam mechanism, the actuator to bias the tooth and cam anchor, a structure module, a latch housing module, and structure on the structure module capable of receiving the bicuspid tooth and the latch anchor. The subcombination has separate utility such as a latching mechanism for telescoping poles.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3641

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
